PROFESSIONAL SUMMARY

Backend Engineer with experience building production-grade systems from scratch using Django and FastAPI, owning system architecture, database design, and API infrastructure end to end. Implemented secure authentication, financial payout workflows with immutable data patterns, and high-performance REST APIs focused on correctness, reliability, and data integrity. Experienced in KPI-driven backend optimization (latency, error rates, consistency) with exposure to AWS-based deployment planning, containerized deployments, and infrastructure-aware backend engineering.

EXPERIENCE

Backend Developer Intern | Loopinx Circle | October 2025 – December 2025

- Designed and implemented a production-grade backend from scratch, owning system architecture, database schema design, ER diagrams, and technical documentation using Django and FastAPI.
- Architected a modular monolith backend with domain-isolated services (authentication, events, payments, analytics), integrating Django ORM with FastAPI via ASGI for scalable API delivery.
- Built secure authentication and authorization systems, including phone-based OTP, JWT authentication, role-based access control, and object-level permissions.
- Developed high-performance REST APIs and deployment infrastructure, optimizing database queries, implementing middleware and global error handling, and containerizing the system with Docker and Nginx for production readiness.

Backend Developer Intern | AiiQA Powered by Code2Tech Innovation Pvt. Ltd | May 2025 - Aug 2025

- Developed backend services, modules, and RESTful APIs using Django Rest Framework (DRF).
- Dockerized the complete project for consistent deployment.
- Designed and implemented secure software architecture while optimizing code performance.
- Collaborated on API documentation and system integration for scalable applications.

Co-Founder | Promotionia (Startup) | June 2023 - March 2025

- Built and maintained full-stack web platforms using PHP to support marketing campaigns and order processing.
 - Automated operational workflows using Python and Google Sheets, reducing manual effort by ~90%.
 - Led and coordinated a 15-member team, improving operational efficiency and execution speed.
-

TECHNICAL SKILLS

Backend & Systems: REST API Design, FastAPI, System Architecture, Modular Monoliths, Authentication & Authorization, Database Design, Query Optimization

Programming Languages: Python, Go, JavaScript, TypeScript, C, PHP, Rust

Backend Frameworks & Libraries: Django, Node.js, React

Databases: PostgreSQL, SQL, SQLite

Deployment, DevOps & Infrastructure: Docker, Nginx, AWS (Foundational), Git, GitHub Actions

Security & Networking Tools: Burp Suite, OWASP ZAP, Metasploit, Wireshark, Nmap, Bettercap

Soft Skills: Problem Decomposition, System Thinking, Technical Documentation, Team Leadership, Ownership & Accountability, Decision-Making

PROJECTS

Telegram Keylogger (Rust)

- Developed a custom keylogger for ethical research, transmitting logs securely to Telegram using the Bot API.

Peer-to-Peer Lending Platform (React + Django)

- Designed a dynamic platform allowing users to rent or lend various categories of items securely.

Anonymous Chat Website (Node.js + WebSocket)

- Built a real-time chat application similar to Omegle.
-

EDUCATION

Parul University - BTech, Computer Science (Cyber Security)

Expected Graduation: 2028

CERTIFICATIONS

Software Engineering Job Simulation — JPMorgan Chase & Co. (via Forage)

Issued: Dec 2025

Completed hands-on backend engineering tasks including project setup, Kafka and H2 integration, REST API development, and controller design within enterprise-style workflows.

Verification Code: mbwqzMzvCS6JaJa3q

Palo Alto Networks Academy

- Network Security Fundamentals | Issued: October 2025

Credential ID: RUT6x5pmTM

- Cybersecurity Foundation | Issued: May 2025

Credential ID: 3ymKKfaihz
